# CIS300 - Case Study Assignment Folders and Submitting Instructions: By Elva Lin
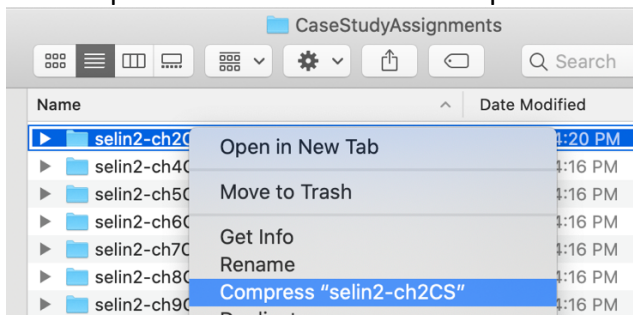

1. For the case study assignment, you will not create a folder called 'pacific' as instructed in the textbook. Instead, the following folders should be created:

2. All files created and modified for a chapter should be located in that chapter's folder. Below is an example for chapter 2 folder:

3. After you finish working on the case study assignment, right click on the folder to compress the folder to create a zip file.

4. Submit the zip file to Canvas. Please note: you will work on 2 chapters' case study assignments from week 3 to week 6, only need to submit the later chapter's zip file to Canvas. For example, in week 3, you will work on chapter 5 and chapter 6's case study assignments, only need to submit chapter 6 case study assignment folder's zip file, yourasurite-ch6CS.zip file (in my case, it will be selin2-ch6CS.zip file)

5. Following the following steps to verify the assignment zipped file:
    1. Unzip the file (double click on the zip file)
    2. Move the yourasurite-ch#CS folder to your desktop (e.g. selin2-ch2CS folder)
    3. Open the yourasurite-ch#CS folder to find a HTML file (e.g. index.html)
    4. Open that HTML file from a text editor then run it in a Chrome browser or open it with Google Chrome directly

    Please NOTE: **hyperlinks in the nav section will NOT work if those html files are in the zip file.**
